EDUCATION

Zicklin School of Business, New York, NY — August 2026 – Present
MBA

Bachelor of Arts in Computer Science with studies in Financial Modeling, Queens College — August 2018- December 2022

SKILLS/CERTIFICATIONS

- **Certifications:** Data Engineering Certificate, Tensorflow Developer Certificate, AWS Certified Cloud Practitioner, Azure Cloud Fundamentals (AZ-900)
- **Programming:** Python, Java, SQL, C++, HTML/CSS, Javascript, JSON, Oracle DB, Impala, Shell Scripting
- **Engineering :** Tensorflow, Pandas, NumPy, Machine Learning, CNNs, ETL, Data Pipelining, Data Warehousing,Data Modeling, Grafana, Tableau, PowerBI, ThousandEyes, Extrahop, Github, Agile, Jira, REST APIs

WORK EXPERIENCE

UBS, Distributed Hosting, Infrastructure — New York, NY
Data Engineer/Business Strategy — July 2024 – September 2026

- Built end-to-end data pipelines using Python, SQL, and PySpark to ingest, validate, and transform production infrastructure data from Kafka and PostgreSQL into analytics-ready datasets in Azure and Snowflake, improving data consistency and downstream reporting.
- Developed automated ETL workflows using Databricks and Spark to standardize schemas, handle missing and duplicate records, and prepare structured datasets for Grafana dashboards and operational analytics, strengthening data quality and pipeline reliability.
- Integrated production data across Kafka, Spark, Kubernetes, Azure, AWS, Snowflake, and PostgreSQL, supporting scalable data flows and centralized observability.
- Developed enterprise data onboarding pipelines for BigPanda and Grafana, standardizing data integration workflows to achieve 80% team adoption against a 60% target and improve workflow efficiency from below 40% to 70%.
- Built Python and SQL automation tools for data validation, quality checks, and ETL workflows, streamlining onboarding and reporting processes while improving data consistency.

Credit Suisse, REPOIT Team — New York, NY
Fullstack Software Engineer — July 2022 – June 2024

- Developed backend functionality for a financial trading application using Java, Python, and SQL, delivering scalable features for production systems.
- Built full-stack features using Java, HTML, CSS, and JSON, performing unit testing and stakeholder reviews to improve the feature delivery workflow by 40% and increase user satisfaction by 50%.
- Developed Java controllers and optimized SQL queries for CRUD operations on trading databases, improving data accuracy and application performance.
- Contributed to Agile development through sprint planning, release planning, and Jira while mentoring new engineers, helping improve team efficiency by 20%.

Credit Suisse, Big Data Team & REPOIT Team — New York, NY
Summer Technical Analyst — June 2021 - August 2021

- Directed the project management for the semantic classifier team. The initial model had 72% accuracy and we raised it to 84% accuracy by using Convolutional Neural Networks.
- Built endpoints by using GetMapping and PostMapping which introduced save functionality to allow users to save their trading filter preferences.
- Conducted testing by interfacing with the Impala database to compare the data load from the newly added SQL versus the original data load.
- Implemented UI changes by using the Angular framework to code the frontend of the save functionality that the user sees.

Bloomberg L.P, Business Intelligence Team — New York, NY
Software Engineering/UI Intern — January 2020

- Designed the front end for a Discussion Board using React/JSON/JS.
- Identified if the design adhered to company standards and applied Bloomberg technology methods for UI & design.
- Honed skills on the Bloomberg Terminal through training, which is a UNIX based terminal and Bash shell.

TECHNICAL EXPERIENCE

Women's Machine Learning Workshop, Intermediate Level Google Chelsea Market — March 2019
